

home State. One of South Carolina's most distinguished native sons, State House Speaker David Wilkins, has been nominated by President George W. Bush to be the United States Ambassador to Canada.

I just spoke with David this morning, and let him know that while we are sad to lose his leadership, we are extremely proud of his appointment.

Both David and I are natives of Greenville, SC, and graduates of Clemson University and have been friends for a long time.

I have long admired his courage and determination to fight for family values and individual freedom. He also possesses a keen understanding of the need to create an economic environment that gives businesses and workers a chance to thrive.

In addition to the talents David brings to this position, his greatest help will come from his lovely wife Susan, who represents the best of South Carolina. Together they have raised two fine sons, James and Robert.

Speaker Wilkins is a legendary public servant. He has served in the South Carolina State House of Representatives since 1981 and led as Speaker for more than a decade.

David is widely respected by all parties for good reason, because he works passionately to better the lives of all South Carolinians. The President could not have chosen a better man, and he will represent our nation well.

I look forward to welcoming David to Washington for his confirmation hearings. I promised him I would work hard to make sure my colleagues know of his exceptional abilities that make him more than qualified for this job.

He enjoys the full confidence of the President of the United States, and the support of South Carolinians. I am sure he will have no problem being confirmed quickly, so he can begin working on behalf of all Americans.

#### AMEND RECA

Mr. BURNS. Mr. President, this day is an important occasion for folks in my State of Montana. This afternoon, at 4 o'clock, the National Academy of Sciences will release an extensive report on health effects resulting from nuclear bomb tests that were carried out at the Nevada test site in the 1950s and 1960s.

For years now, Montanans and their loved ones have experienced the pain of developing various forms of cancer, most commonly, cancer of the thyroid, caused by exposure to this dangerous radiation. These cancers seemed to be a little too common among people living in certain areas of our State. According to the National Academy of Sciences, these innocent victims—mostly children and babies—who were living in Montana, were exposed to the highest dosages of radiation of any State in the Nation as a result of this nuclear testing; even more than Nevada, where the tests were actually

conducted. You see, the radioactive iodine is the part that is dangerous. It was blasted high up into the atmosphere and the wind carried it north to Montana where it finally settled on the ground, then into the water and food supply.

Thyroid cancer takes around 10 to 40 years to develop. Radiation exposure in the late 1950s might not manifest in cancer until the late 1990s. While the national average for thyroid cancer has remained steady over the past 30 years, the rate of reported thyroid cancer in Montana has increased steadily. In 1980, Montana State had a rate of thyroid cancer 6.2 times the national average. In 1990, that rate had increased to 10.8 times the national average, and in 2000 the rate of reported thyroid cancer in Montana was almost 18 times the national average.

The 1990 Radiation Exposure Compensation Act, RECA, PL 101-426, established the Radiation Exposure Compensation Trust Fund for claims for injuries and death due to exposure from the Nevada testing. Under RECA, folks who were residing in parts of the States of Utah, Nevada, Arizona, Colorado, New Mexico during certain times in the 1950s received a substantial amount of compensation from the U.S. Government along with an apology. Research now proves the State of Montana was hit the hardest by this radiation; yet its victims are not eligible for compensation under RECA.

Not only do these folks deserve an apology from the U.S. Government, but they deserve this compensation. As a cancer survivor, I cannot begin to tell you the mental, emotional, physical and financial hardship these cancer victims have endured—in order to serve the national security interests of the United States.

I strongly recommend that we, as a Congress, apologize to these individuals and amend RECA to compensate folks from my State of Montana as well as other States who have been affected by this tragedy.

#### AUSTRALIAN PARTICIPATION IN IRAQ

Mr. ALEXANDER. Mr. President, I have spoken here previously about the contribution that one of our closest allies, Australia, has made to support our efforts in Iraq and in the ongoing war against terror. At a time when other members of the international coalition in Iraq are beginning to draw down or remove their forces from the region, Australia continues to do its part.

In fact, over the following weeks, Australia will expand its commitment to Iraq by about 50 percent. This will increase the total Australian military personnel currently working in or around Iraq to 1,370. These additional Australian troops will provide a secure environment—following the withdrawal of Dutch troops—for Japanese engineers who are involved in the re-

construction efforts in the Al Muthanna Province in southern Iraq. The additional troop commitment will also bolster the existing training of Iraqi forces by Australian troops—training which is essential to the successful transformation of Iraq into a secure democracy.

Australia has always been a great friend and ally of ours. It shares a tradition of democracy and a dedication to the values of freedom and respect for life that we hold dear in the United States. Australia is, in fact, the only nation to have sent forces to fight alongside the United States in every major conflict during the 20th century, including Afghanistan, the first Gulf War, Vietnam, Korea, and both World Wars.

Sixty-eight years ago, when Americans and Australians fought alongside one another at the Battle of the Coral Sea, during the darkest days of the Second World War, only 12 democracies survived on the face of the earth. The United States and Australia were 2 of the 12. Today, when more people vote for their own governments than ever before, and as fledgling democracies emerge in the Middle East and Eastern Europe, it is important to remember how precious democracy is, and to recognize and thank our allies, such as Australia, who have always stood beside us and fought in the defense of liberty.

Earlier this month, I traveled with Senator REID and six other Senators to Iraq, Israel, the Palestinian Territories, Georgia, and Ukraine. During that trip it was clear that the Iraqi elections—the bravery of the Iraqi people in staring down intimidation and violence to go to the ballot box—had been an inspiration to that part of the world. But, in the short term, democracy in Iraq can only take hold with the continued support of coalition troops—including those from Australia.

So I thank the Australian troops and the Australian people for the crucial help they continue to provide to this important mission in Iraq. Prime Minister Howard and Foreign Minister Downer have shown leadership and courage in standing with us in this difficult time. Their support is important to building on the success of January's elections so that Iraq may continue on its difficult path toward democracy.

#### PUBLICATION OF PHOTOGRAPHS OF ABUSE AT ABU GHRAIB PRISON

Mr. LEAHY. Mr. President, one year ago today, the horrific photos of detainee abuse at Abu Ghraib prison shocked the Nation and tarnished our reputation as the world's human rights leader. One year later, we should be able to assure the world that the detainee abuse scandal has been independently and comprehensively investigated and that all those involved, from the people who committed abuses
